## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

**Claims 9, 15, 21, and 27** are rejected under 35 U.S.C. 102(b) as being anticipated by Decant, Jr. et al. The referenced patent discloses an implantable medical pump comprising a fluid reservoir, a passive regulator assembly adjustable to a plurality of flow rate settings for regulating the flow of fluid from the fluid reservoir; electromechanical control means for changing the passive regulator assembly from a first flow rate setting to a second flow rate setting when the electromechanical control means receives an induced voltage and in response to control signals; and means for receiving radio frequency signals operative to maintain the induced voltage in the electromechanical control means in response to a radio frequency signal.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-8, 10-14, 16-20, and 22-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Decant, Jr. et al., in view of Reinicke, et al.** The Decant, Jr.

Art Unit: 3763

et al., patent does not disclose the specific use of radio frequency signals as the means of communication between the programmable unit and the telemetry transceiver.

However, the use of telemetry signals at the radio frequency range is conventional as evidenced by the teachings of Idriss, et al. In column 7, line 47, the patent discloses the use of a radio frequency link between the external controller and the implanted telemetry coil in the implantable drug delivery system. Accordingly, it would have been obvious to modify Decant, Jr. et al., by substituting for the telemetry link thereof, a radio frequency telemetry link as taught by Idriss, et al.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Manuel Mendez whose telephone number is 703-308-2221. The examiner can normally be reached on 0730-1800 hrs.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Richard Seidel can be reached on 703-308-5115.
